SOIL SCIENCE

Editor-in-Chief
JACOB G. LIPMAN

Associate Editor
HERMINIE BROEDEL KITCHEN

ADVISORY STAFF

A. W. Blair, J. S. Joffe, L. L. Lee, H. C. McLean, A. L. Prince, J. W. Shive, H. B. Sprague, R. L. Starkey, and S. A. Waksman, New Jersey Agricultural Experiment Station, New Brunswick, N. J.

CONSULTING EDITORS

F. J. Alway
University of Minnesota, St. Paul, Minn.

K. Aso
Imperial University, Tokyo, Japan

C. Barthel
Lantbrukshögskolan, Uppsala, Sweden

Richard Bradfield
College of Agriculture, Cornell University, Ithaca, N. Y.

B. C. Burt
Imperial Council of Agricultural Research, New Delhi, India

H. J. Conn
New York State Experiment Station, Geneva, N. Y.

Albert Demolon
Ministry of Agriculture, Paris, France

E. B. Fred
University of Wisconsin, Madison, Wis.

V. V. Gemmerling
Agronomitsheskii Institute, Moskovskii Universitat, Moscow, U. S. S. R.

J. E. Greaves
Utah Agricultural College, Logan, Utah

D. J. Hissink
Soil Science Institute, Groningen, Holland

D. R. Hoagland, University of California, Berkeley, Calif.

O. Lemmermann
Berlin-Zehlendorf, Germany

C. B. Lipman
University of California, Berkeley, Calif.

Burton E. Livingston
Johns Hopkins University, Baltimore, Md.

Henrik Lundegårdh
Centralanstalten för jordbruksförsök, Stockholm, Sweden

M. M. McCool
Boyce-Thompson Institute, Yonkers, N. Y.

W. H. MacIntire
University of Tennessee, Knoxville, Tenn.

S. Mattson
Lantbrukshögskolan, Uppsala, Sweden

S. Miklasewski
Institute of Soil Science, Warsaw, Poland

E. A. Mitscherlich
University of Königsberg, Germany

C. A. Mooers
University of Tennessee, Knoxville, Tenn.

D. N. Prianishnikov
Timiryazev Academy, Moscow, U. S. S. R.

Theo. Remy
Bonn-Rhein, Germany

George W. Robinson, University College of Wales, Bangor, Great Britain

G. Rossi
R. Università di Napoli, Portici, Italy

E. J. Russell
Rothamsted Experimental Station, Harpenden, England

O. Schreiner
U. S. Department of Agriculture, Washington, D. C.

Alexius A. J. de'Sigmond
Royal Hungarian Joseph University of Technical Sciences, Budapest, Hungary

N. M. Tulaikov
Agricultural Experiment Station, Saratov, U. S. S. R.

Emile H. del Villar
Forestry Institute, Madrid, Spain

S. Winogradsky
Pasteur Institute, Paris, France

Entered as second-class matter May 18, 1919, at the post office at Baltimore, Maryland, under the act of March 3, 1879

CONTENTS

Results of Lysimeter Experiments. A. DEMOLON AND E. BASTISSE 1
The Leaching Action of Rain Water upon Dolomite and Limestone Separates Incorporated with Quartz in Outdoor Lysimeters. W. H. MACINTIRE, W. M. SHAW, AND BROOKS ROBINSON 9
An Efficient and Convenient Type of Cooling and Freezing Bath. GEORGE JOHN BOUYOUCOS 21
The Laterites of Western Samoa. F. T. SEELYE, L. I. GRANGE, AND L. H. DAVIS 23
Ferromanganiferous Concretions from Some Podzolic Soils. ERIC WINTERS 33
The Presence of Titania in Chemically Unweathered Soils. ANTTI SALMINEN 41
Isohydric pH Value of Soils and Its Determination. AMAR NATH PURI AND ANAND SARUP 49
Microbial Activities in Soil: IV. Microflora of Different Zonal Soil Types Developed under Similar Climatic Conditions. S. C. VANDECAVEYE AND H. KATZNELSON 57
Book Reviews 75
Studies on the Behavior of Manganese in Soils. A. L. PRINCE AND S. J. TOTH 83
The Movement of Water in Heavy Soils after Irrigation. E. C. CHILDS 95
A Field Outfit for Determining the Moisture Content of Soils. GEORGE JOHN BOUYOUCOS 107
Hydrogen-Ion Activity of Colloidal Acids in Soils. AMAR NATH PURI AND A. N. DUA 113
On the Formation of Structure in Soil: IV. The Structure of Mixed Clay-Sand and Clay-Humus Formations. D. I. SIDERI 129
Microbial Activities in Soil: V. Microbial Activity and Organic Matter Transformation in Palouse and Helmer Soils. S. C. VANDECAVEYE AND H. KATZNELSON 139
Book Reviews 169
Cation Equilibria in Plants in Relation to the Soil. TH. B. VAN ITALLIE 175
Fertilization in its Relationship to the Course of Nutrient Absorption by Plants. TH. REMY 187
An Evaluation of the Neubauer and the Cunninghamella and Aspergillus Niger Methods for the Determination of the Fertilizer Needs of a Soil. C. A. MOOERS 211
Behavior of Calcium, Magnesium, and Potassium Sulfates, as Influenced by Limestone and by Dolomite—A Lysimeter Study. W. H. MACINTIRE, W. M. SHAW, J. B. YOUNG, AND BROOKS ROBINSON 229
Influence of Salts and Soil-Water Ratio on pH Value of Soils. AMAR NATH PURI AND A. G. ASGHAR 249
A Theory Explaining the Relation of Soil-Water Ratios to pH Values. CLARK M. KEATON 259
On the Formation of Structure in Soil: V. Granular Structure. D. I. SIDERI 267
The Effect of Sheep and Goat Manure on Some Mediterranean Red Soils. M. PUFFELES AND S. ADLER 273
Economical Uses of Fertilizer Elements by Certain Forage Crops. BASIL E. GILBERT AND FREDERICK R. PEMBER 279
Effect of "Alkali" Salts on General Microbial Function in Soil. WALTER B. BOLLEN AND SADEGH M. AHI 287
Further Studies of Bacterium globiforme and the Incidence of This Type of Organism in Canadian Soils. C. B. TAYLOR 307
Oxidation-Reduction Potentials in Soils. AMAR NATH PURI AND ANAND SARUP 323

A Mechanical Device for Determining the Permanent Wilting Point of Soils by Means of the Cohesion Method. GEORGE JOHN BOUYOUCOS 331
On the Formation of Structure in Soil: VI. Method of Microscopic Investigation of Soil Structure in Reflected Light. D. I. SIDERI 337
The Influence of Environmental Factors on Numbers of Soil Microorganisms. W. G. E. EGGLETON 351
The Effect of Moisture Changes on Soil as a Medium for Bacterial Growth. H. J. CONN AND MARY A. DARROW 365
The Chemical Composition of Soil from Cultivated Land and from Land Abandoned to Grass and Weeds. A. L. PRINCE, S. J. TOTH, AND A. W. BLAIR 379
Action of Hydrogen Peroxide on Weathered Mica. M. DROSDOFF AND E. F. MILES 391
Rapid Determination of Organic Carbon in Soil. E. M. EMMERT 397
Interaction Between Carbonates and Soils. AMAR NATH PURI AND M. L. PURI 401
Organic Phosphates: I. Fixation Studies with Three Different Soil Types. G. E. HILBERT, L. A. PINCK, M. S. SHERMAN, AND T. H. TREMEARNE 409
Book Reviews 419
Observations Regarding Soils of Northern and Central Mexico. JOHN T. MILLER AND IRVIN C. BROWN 427
The Movement and Fixation of Superphosphate in Soils. B. E. BEATER 453
Action of Carbon Dioxide on Soils. A. N. PURI AND H. L. UPPAL 467
Coenzyme R. Requirements of Rhizobia. F. E. ALLISON AND F. W. MINOR 473
Book Reviews 485
Index 495

ILLUSTRATIONS

PLATES

A Field Outfit for Determining the Moisture Content of Soils

Plate 1. Field Outfit for Determining Moisture Content of Soils by the Burning-Alcohol Method 111
Fig. 1. Open view of the box with glass windows 111
2. Closed view of box 111

On the Formation of Structure in Soil: IV. The Structure of Mixed Clay-Sand and Clay-Humus Formations

Plate 4. The Structure of Clay and of Clay-Sand and Clay-Humus Mixtures 137
Fig. 1. Clay-sand mixture 137
2. Clay-humus mixture 137
3. Clay "Toida" after treatment with Tamm's reagent 137
4. Clay "Toida" before treatment with Tamm's reagent 137

On the Formation of Structure in Soil: V. Granular Structure

Plate 1. Disintegration of the Sand-Clay-Humus Mixture 271

Further Studies of Bacterium globiforme and the Incidence of This Type of Organism in Canadian Soils

Plate 1. Cultures of *Bacterium globiforme* Conn 321
Fig. 1. *Bacterium globiforme* Conn, 12-hour culture on beef-peptone agar at 28°C., gentian violet stain, showing rod stage 321
2. *Bacterium globiforme* Conn, 48-hour culture on beef-peptone agar at 37°C., gentian violet stain, showing bulbous rods 321
3. *Bacterium globiforme* Conn, 48-hour cultures in nutrient broth at 28°C., gentian violet stain, showing branched forms 321
4. *Bacterium globiforme* Conn, 48-hour cultures in nutrient broth at 28°C., gentian violet stain, showing branched forms 321
5. *Bacterium globiforme* Conn, 2-week culture on synthetic medium containing dextrose and cystine, gentian violet stain 321
6. *Bacterium globiforme* Conn, 2-week cultures on synthetic medium containing dextrose and $NaNO_3$, gentian violet stain, showing oval yeast-like cells 321
7. *Bacterium globiforme* Conn, 2-week cultures on synthetic medium containing xylose and $NaNO_3$, gentian violet stain, showing deeply staining bodies 321

A Mechanical Device for Determining the Permanent Wilting Point of Soils by Means of the Cohesion Method

Plate 1. Base, Roller, Pile of Soil before Being Pressed and after Being Pressed, and Pressed Soil Lifted by Roller 335

ON THE FORMATION OF STRUCTURE IN SOIL: VI. METHOD OF MICROSCOPIC INVESTIGATION OF SOIL STRUCTURE IN REFLECTED LIGHT

Plate 5. Fig. 1. The polished clay section "volkonskonite" 347
2. The structure of lamina of desiccated gel (Na-clay "Toida") 347
3. The polished section of "red clay" 347
4. Cross section of the clay lamina ("Toida") and the adhesive material (Na-peat humate) 347
5. Watertight aggregate of the granular structure of weakly leached chernozem 347
6. Watertight columnar alkali soil 347
7. Watertight aggregate of a podzol soil 347
8. The plowed layer of the soil from the Kuznetzk Experiment Station .. 347
9. The underlying layer of the soil shown in figure 8 347
10. The chernozem soil (Kamennaya steppe) saturated with sodium and slightly washed with water 347
11. The soil shown in figure 10, between Nicol prisms 347
12. The columnar alkali soil from Volchia River. The vertical section .. 347
13. The soil shown in figure 12. The horizontal section 347
14. The soil shown in figure 12, between Nicol prisms 347
Plate 6. Fig. 1. The serozem soil from the Ak-Kawak Experiment Station 349
2. The soil shown in figure 1, treated with the products of autolysis of *Aspergillus niger* 349
3. The Plavsky chernozem soil 349
4. The Plavsky chernozem covered with a thin layer of autolytic products of *Aspergillus niger* 349
5. The Plavsky chernozem covered with a thick layer of autolytic products of *Aspergillus niger* 349
6. The chernozem soil of Suma Agricultural Experiment Station 349
7. The soil shown in figure 6. With 52 tons of manure 349
8. The soil shown in figure 6. With mineral fertilizers 349
9. The soil shown in figure 6. With 52 tons of manure in a pea-sugar beet crop rotation 349

ACTION OF HYDROGEN PEROXIDE ON WEATHERED MICA

Plate 1. Mica Particles in Water Compared with Similar Particles in 6 per cent Hydrogen Peroxide Solution 395

OBSERVATIONS REGARDING SOILS OF NORTHERN AND CENTRAL MEXICO

Plate 1. Some Soils of Mexico 451
Fig. 1. Chernozem profile in excavation south of Irapuato, Guanajuato, showing the unusual depth of the dark colored soil 451
2. Cultivated fields on steep slopes in the laterite soils region south of Tamazunchale, Potosi 451
3. Profile of a laterite soil south of Tamazunchale, Potosi, showing the steep slopes on which the laterite soils are developed, and also the dense forest in this region 451
4. Profile showing unusually deep organic A_1 horizon at an elevation of approximately 13,000 feet on Navado de Toluca 451

TEXT-FIGURES

AN EFFICIENT AND CONVENIENT TYPE OF COOLING AND FREEZING BATH

Fig. 1. An Efficient Cooling Bath Used in Connection with the Dilatometer Method and in Freezing-Point Determinations 22

ISOHYDRIC pH VALUE OF SOILS AND ITS DETERMINATION

Fig. 1. Isohydric Titration Curves of Soils 52
2. The pH Values of Soils as Determined by Different Workers and by Different Methods 54

MICROBIAL ACTIVITIES IN SOIL: IV. MICROFLORA OF DIFFERENT ZONAL SOIL TYPES DEVELOPED UNDER SIMILAR CLIMATIC CONDITIONS

Fig. 1. Numbers of Bacteria, Actinomyces, and Fungi per Gram of Dry Soil in Palouse Silt Loam (Pullman) 60
2. Numbers of Bacteria, Actinomyces, and Fungi per Gram of Dry Soil in Palouse Silt Loam (Troy) 61
3. Numbers of Bacteria, Actinomyces, and Fungi per Gram of Dry Soil in Helmer Silt Loam 62
4. Percentages of Soil Moisture Based on Dry Weight at Different Depths and Sampling Periods 64

THE MOVEMENT OF WATER IN HEAVY SOILS AFTER IRRIGATION

Fig. 1. Moisture Profiles Illustrating Effect of Different Surface Conditions on the Calculated Profiles for Eastern Gezira Soil 98
2. Comparison Between Observed and Calculated Moisture Profiles for Gezira Soil to Which 1 Ton of Gypsum per Acre Had Been Applied 99
3. Moisture Profiles for Gezira Soil to Which 4 Tons of Gypsum per Acre Had Been Applied 100
4. Comparison Between Observed and Calculated Moisture Profiles for Gezira Soil to Which 10 Tons of Gypsum per Acre Had Been Applied 101
5. Comparison Between Observed and Calculated Moisture Profiles at Various Intervals After Irrigation 102

HYDROGEN-ION ACTIVITY OF COLLOIDAL ACIDS IN SOILS

Fig. 1. Relation Between pH Value and Hydrolysis of Ethyl Acetate 114
2. Effect of Temperature on Hydrolysis of Ethyl Acetate by Soil and KCl-HCl Buffer at pH 2.03 117
3. Effect of Time of Shaking and of Quantity of Soil on the Hydrolysis of Ethyl Acetate 118
4. Effect of Concentration of Ethyl Acetate on Hydrolysis by Soil 119
5. Relation between pH Values and Sugar Inversion. Na-Acetate-Acetic Acid Buffer, 4 Hours' Shaking at 60°C 124
6. Effect of Temperature on Inversion by P.C. 13 Soil 125
7. Relation between Quantity of Soil and Inversion of Sugar 126

MICROBIAL ACTIVITIES IN SOIL: V. MICROBIAL ACTIVITY AND ORGANIC MATTER TRANSFORMATION IN PALOUSE AND HELMER SOILS

Fig. 1. Carbon Dioxide Production and Number of Microbes in Variously Treated Helmer Silt Loam 143
2. Carbon Dioxide Production and Number of Microbes in Variously Treated Palouse Silt Loam 144
3. Bacteria in Helmer Silt Loam and in Palouse Silt Loam 146
4. Actinomyces in Helmer Silt Loam and in Palouse Silt Loam 147
5. Fungi in Helmer Silt Loam and in Palouse Silt Loam 149
6. Aerobic Cellulose-Decomposing Bacteria in Helmer Silt Loam and in Palouse Silt Loam 150
7. Organic Carbon Fractions in Percentages of the Amounts Present in the Soil at the Beginning of the Experiment 154

8. Nitrogen Fractions in Percentages of the Amounts Present in the Soil at the Beginning of the Experiment 154
9. Eh and pH Values of Helmer and Palouse Silt Loams 158

CATION EQUILIBRIA IN PLANTS IN RELATION TO THE SOIL

Fig. 1. Relation Between Exchangeable Calcium in the Soil and Its Concentration in the Plant 179
2. Relation Between Exchangeable Magnesium in the Soil and Its Concentration in the Plant 179
3. Relation Between Exchangeable Sodium and Potassium in the Soil and Their Concentrations in the Plant 180
4. Relation Between the Soil Value for Exchangeable Calcium, Calculated by the Given Formula, and the Concentration in the Plant 183
5. Relation Between the Soil Value for Exchangeable Magnesium, Calculated by the Given Formula, and the Concentration in the Plant 184
6. Relation Between the Soil Value for Exchangeable Sodium, Calculated by the Given Formula, and the Concentration in the Plant 184
7. Relation Between the Soil Value for Exchangeable Potassium, Calculated by the Given Formula, and the Concentration in the Plant 185

AN EVALUATION OF THE NEUBAUER AND THE CUNNINGHAMELLA AND ASPERGILLUS NIGER METHODS FOR THE DETERMINATION OF THE FERTILIZER NEEDS OF A SOIL

Fig. 1. P_2O_5 Content of Limed and Unlimed Plot Sections of Cumberland Loam at the Knoxville Station, as Determined by the Neubauer and the Cunninghamella Methods 221
2. K_2O Content of Limed and Unlimed Plot Sections of Cumberland Loam at the Knoxville Station, as Determined by the Neubauer and the Aspergillus niger Methods 222

BEHAVIOR OF CALCIUM, MAGNESIUM, AND POTASSIUM SULFATES, AS INFLUENCED BY LIMESTONE AND BY DOLOMITE— A LYSIMETER STUDY

Fig. 1. Outgo of Calcium, Magnesium, and Potassium from a Sod-Skimmed Soil Treated with Seven Annual Equivalent Incorporations of Sulfates of Calcium, Magnesium, and Potassium, with and without a Single Initial Addition of Either Limestone or Dolomite 240

INFLUENCE OF SALTS AND SOIL-WATER RATIO ON pH VALUE OF SOILS

Fig. 1. Effect of Magnesium, Lithium, Strontium, and Barium Chlorides on the pH Values of their Corresponding Soils 253

EFFECT OF "ALKALI" SALTS ON GENERAL MICROBIAL FUNCTION IN SOIL

Fig. 1. Effect of "Alkali" Salts on Organic Decomposition in Willamette Silty Clay Loam 290
2. Effect of Treatment on Carbon Dioxide Evolved from Virgin Saline Soil 296
3. Effect of Treatment of Carbon Dioxide Evolved from Reclaimed Saline Soil 296

FURTHER STUDIES OF BACTERIUM GLOBIFORME AND THE INCIDENCE OF THIS TYPE OF ORGANISM IN CANADIAN SOILS

Fig. 1. Correlation of Characters of Bact. globiforme, Types I and II 317

OXIDATION-REDUCTION POTENTIALS IN SOILS

Fig. 1. Relation between pH and E_h of Single-Base Soils 325
2. Relation between pH and E_h of Various Colloidal Substances 327
3. Stabilization of pH—E_h Relationship by Clay and Artificial Zeolite in Buffer Solution 328

THE CHEMICAL COMPOSITION OF SOIL FROM CULTIVATED LAND AND FROM LAND ABANDONED TO GRASS AND WEEDS

Fig. 1. Nitrogen in Cultivated and Uncultivated Soils at Different Periods 382
2. Carbon in Cultivated and Uncultivated Soils at Different Periods 382

INTERACTION BETWEEN CARBONATES AND SOILS

Fig. 1. Titration of Sodium Carbonate with Various Acids and with Soil Acidoid 402
2. Titration of Sodium Carbonate with Calcium Salts and with Calcium Soil 403
3. Titration of Calcium Carbonate with Various Acids and with Soil Acidoid 405
4. Influence of Calcium and Sodium Salts and of Corresponding Soils on the pH Value of Calcium Carbonate Suspension 407
5. Titration Curve of H-Soil with Calcium Carbonate 408

ORGANIC PHOSPHATES: I. FIXATION STUDIES WITH THREE DIFFERENT SOIL TYPES

Fig. 1. Time Dependence Curves of Immobilization of Organic and Inorganic Phosphates by Raw and Sterilized Norfolk Soil 413
2. Time Dependence Curves of Immobilization of Organic and Inorganic Phosphates by Raw and Sterilized Las Vegas Soil 413

OBSERVATIONS REGARDING SOILS OF NORTHERN AND CENTRAL MEXICO

Fig. 1. Rainfall Map of a Part of Mexico 429
